POWDER-X BATCH OVEN
6H x 6W x 10L
(inside dimensions)

Powder-X Batch Ovens offer a revolutionary solution for our customers' drying, preheating, and curing needs. **Powder-X** is the ORIGINAL batch oven supplier to the powder coating industry and has remained the industry leader thru a constant drive for improvement. Our batch ovens have been proven to be the least costly to operate while also being the quickest-to-temperature on the market.

The **Powder-X** commitment to customer satisfaction went into every detail of our Equipment: From 6" walls and faster heat-up times, to lower emissions and less gas usage, these ovens were designed to meet and exceed our customers' expectations.

Powder-X Batch Ovens are BY FAR the best value on the market. We maintain low pricing because of our volume while providing top of the line technology.

POWDER-X SPRAY ENCLOSURE
7H x 8W x 10L

Enclosure

- All booth walls and roof are constructed of 18 gauge or thicker PAINT LOC GALVANEALD metal for increased durability of less quality "galvalume" or "galvanized" booths

Exhaust System

- Powder-X Booths utilize a 3-stage sprat-to-waste exhaust system consisting of a blanket filter, high-efficiency pocket filters, and ASHRAE tested and certified HEPA filters. The filtration system has been designed to exceed specifications on high efficiency commercial and industrial application and are over 95% efficient on particle sizes .5 (1/2) micron and larger! Cartridge filter booths are also available.
- Only the highest quality fans and motors on the market are used, insuring less down time than inexpensive liquid booths that have been "modified" for powder. Our booths are designed to help you meet and exceed all code requirements.

Lighting & Controls

- Powder-X booths offer a Variable Frequency Drive option for adjustable air speed.
- Our booths use 4-tube T-8 48" commercial fluorescent fixtures. By using T-8 fixtures, owners can realize up to a 45% electricity savings and improved reliability over T-12 bulbs normally used.

POWDER COATING GUN

- Proportional powder control, available as an optional extra, controls powder output in relation to distance of gun from object ensuring smooth powder lay-down even with high powder build.
- Gives improved safety, efficiency of charging, minimum surface disruption and unrivaled recoatability.

FREE!!!

This package also includes:

- **“Job Costing for Paint & Powder Coating” CD-ROM**

Designed in conjunction with SME, this software helps you discover your actual costs by prompting you to input certain data. You then determine your desired profit margin and the software will provide you with customer pricing.

- **"The Basics" 2-Pack DVD Training Series**

“The Hands-On Approach,” “Pretreatment,” “Powder Application Control,” “Powder Value”

- **Free admission to Powder Coating Training Class “The Basics” for two (2) people**

This 2-day course is designed to give you the tools needed to be the best in the Powder Coating industry. Day One takes place in the classroom and covers topics from pretreatment, materials, codes, and marketing. Day Two takes place in our powder coating facilities where you receive hands-on training.

- **One Day of On-Site Oven Startup & Training**

A factory authorized technician will start up your oven and train you how to use it. Every oven is fine tuned to assure the most cost-effective, productive operation for the customer.
